

Retail Analytics – Complete Bronze → Silver Flow

Complete source-to-curated Silver pipeline

Retail Analytics – Recommended Silver Tables

Detailed curated tables designed for detailed analysis and downstream Gold analytics

Silver Table	Type	Grain	Purpose
dim_customer	Dimension	Customer	Curated customer master; cleaned contact/location; registration; tenure; active flag
dim_product	Dimension	Product	Curated product master; category/subcategory; brand; price; tax; price band; active flag
fact_orders	Fact	Order-product	Detailed online orders; customer/product keys; channel; quantity; amount; derived measures
fact_store_sales	Fact	Store sale	Detailed store transactions; store/customer/product keys; quantity; amount; payment method
fact_inventory	Fact	Store-product-date	Daily inventory; available qty; reorder level; safety stock; inventory value; stock status
fact_payment	Fact	Payment	Payment detail; order/customer keys; amount; method; status; success flag
fact_sales_detail	Enriched Fact	Sales transaction	Unified online + store sales enriched with customer, product, payment and calendar attributes

Silver Layer Design Principles

- Preserve detailed business transaction grain; do not prematurely aggregate.
- Use dimensions for reusable master attributes and facts for measurable business events.
- Keep source/audit columns where applicable and add Silver processing timestamps.
- Use fact_sales_detail as an enriched analytical convenience dataset.

Retail Analytics – Transformation Relationship

Bronze source tables → Silver curated tables and enrichment relationships
